Oil Filter Cover

NOTE

BQUAZY recommends installation be done by qualified individuals.

Models

These Kits are designed to fit Sportster Models 1986 to present That are using Harley-Davidson brand oil filters

Kit Contents

1 - Oil Filter Cover

This Oil Filter Cover was designed to fit over Harley-Davidson brand oil filters. It may not fit properly over other brand filters.

We recommend installing or removing the cover when your bike engine is cold. It may be difficult to slide the cover over a warm expanded filter. You may also risk burn injuries if working next to a hot engine.

If you encounter problems with installation or removal refer to page 2 for tips. You can also ask for help from tech support at tech@bquazysportster.com or call 515-597-2799.

Not only will your oil filter cover look good it will also act as a heat sink. This will help lower the oil temperature.

The placement of the expansion slot is your personal preference. Most people prefer it be installed down or out of sight.

Installation Tip:

Make sure filter is cold before attempting to install cover. If necessary for installation you can use a rubber mallet to carefully tap the cover in place over the oil filter. Make sure not to use enough force that would damage the cover or oil filter.

Removal Tip:

Make sure filter is cold before attempting to remove. If you are having trouble removing your cover, wrap a flat screw driver with electrical tape to help prevent damaging the cover. Use the screw driver to pry the expansion slot while sliding the cover off. This will not require a lot of force since the cover is made of a flexible aluminum.
